

DURING STORMS & DISASTORS GAS KEEPS THE POWER ON!

Power failure is particularly problematic for homes that are solely heated with electric.

Widespread power outages during the winter months and summer storms can directly impact vulnerable populations such as the elderly & the medically frail.

Don't Be Left In The Cold!

Speak out against

The Climate Solutions Now Act of 2022

SB0528, HB708, HB806 & HB0831

IF the Maryland Legislature has their way, they will force Maryland Residents to put all of their eggs into one electric basket.

During a power outage Maryland Residents would be left in the dark & without the ability to heat their homes. Back up Generators, Non-Electric Gas heaters, Gas DV fireplaces, Reliable Gas cook stoves and ovens, would become a thing of the past.

TAKE ACTION HAVE YOUR VOICE HEARD!

Please join us in this critical effort to focus attention on Maryland's effort to ban Natural and Propane gas and force ALL Electric Mandates on it's residents.

Restricting Marylanders to electricity for their heating, hot water, and cooking needs is expensive and unacceptable.

There are safer and more practical ways to reduce our carbon footprint

SPEAK UP FOR YOUR ENERGY FUTURE

WARNING!

Maryland's Legislature Is Pushing For Gas Bans & All Electric Mandates

It Is Going To Cost You, Unless You SPEAK UP!

If you are a MD. Resident You will soon be Forced to Electrify Your Home.

MD is in the beginning stages of mandating that all MD Residents Electrify their:

- Gas Cooking Appliances.
- Gas Water Heaters.
- Gas Dryers.
- Gas & Oil Space Heaters.
- Gas & Oil Furnaces & Boilers.

SUPPORT FUEL CHOICE 20 US States Already Do

Say No to Electrification

The Maryland Legislature is attempting to mandate electrification and eliminate energy choice by restricting the use of gas appliances in homes and businesses.

Our industry supports Decarbonization efforts, but we believe that there is no, one-size-fits-all approach, and that traditional fuels, such as natural gas and propane, are part of the solution.

Maryland Residents and Commercial Businesses should have the choice on how they Cook, Heat and produce their hot water. Choice produces the reliability that MD. Residents have come to expect.

CAN MARYLAND MAKE A DIFFERENCE

Understanding The Numbers & Keeping Things in perspective

China Produces .23918838096 of the Worlds CO Emissions or 23.91%

The US Produces .11839771833 of the Worlds CO Emissions or 11.83%

Maryland Produces .00123621492 of the Worlds CO Emissions or 0.12 %

Maryland Is Not The Problem or The Answer

If Maryland Reduced CO Emissions by 100 %, the United States would STILL produce 11% of the Worlds Co Emissions.

The percentage needle would move from 11.83% to 11.71%. As you can see, Maryland is not the Problem or the Answer.

**The Maryland Legislature
Needs to Slow Down
Hear it's Constituency &
Consider the Cost and Effect.**
